Notes: These instructions are for Windows XP (which we highly recommend with our USB Interfaces).   Installation under Windows 98/ME/2000 is similar, but not necessarily identical.

1. Make sure you have already downloaded and installed VAG-COM on your PC before following these instructions.
   If you haven't yet downloaded VAG-COM, then click HERE to open our download page in a new window.
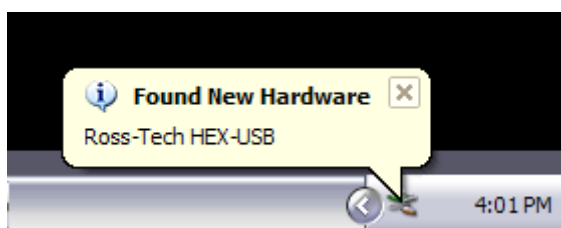

2. Allow the software you just downloaded to install itself on your PC.
   If you choose to install it someplace other than the default location,
   make a note of folder you're installing it to.

3. Plug your Ross-Tech USB Interface to your PC's USB port.
   (It is *not* necessary to connect the interface to a car yet)
   The following message may appear on your PC's Taskbar:

4. The New Hardware Found Wizard should appear:

screen above, select "**Install from a list or specific location (Advanced)**"

then click the [**Next >**] button.
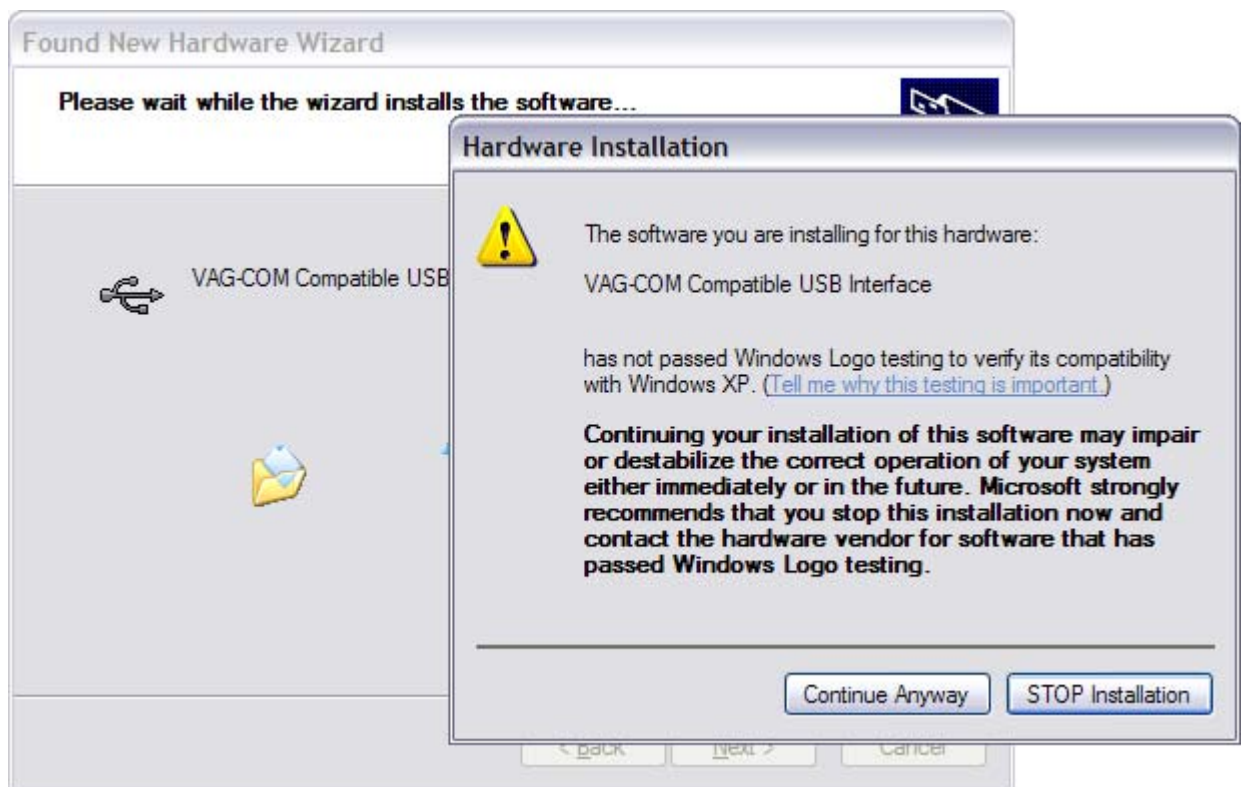

6. The following dialog should appear:

Found New Hardware Wizard

Please choose your search and installation options.

◉ Search for the best driver in these loc

  - ⊟ 💻 My Computer
    - ⊞ 💾 3½ Floppy (A:)
    - ⊟ 💿 Local Disk (C:)
      - ⊟ 📁 Program Files
        - ⊟ 📁 **VAG-COM**
          - 📁 Debug
          - 📁 Labels
          - 📁 Logs

To view any subfolders, click a plus sign above.

OK   Cancel

7. On the screen above:

Select "**Search for the best driver in these locations**"

Check "**Include this location in the search**:"

Use the [**Browse**] button to find the VAG-COM folder

(Usually **C:\Program Files\Vag-Com**,

unless you chose a different folder when you installed the software)

Click [**OK**]

9. Click the [**Next >**] button.

10. The following dialog should appear:

11. This dialog warns you that we haven't paid Microsoft a pound of flesh to certify the driver.

You're going to have to click the [**Continue Anyway**] button..:-)

13. Click the [**Finish]** button to complete the installation.

14. Start VAG-COM.

Click the [**Options**] button.

In the "Select COM Port" box, select **USB**.

Click the **[Test]** button.

The results should look like this (it may have additional information in the Port Test dialog).

15. Click **[OK]** and click **[Save]**

16. Go test it on a car.   :-)

NOTE: If the new Hardware Found Wizard does not appear when you plug in your interface, go to Device Manager and look for the interface. It should be under **Universal Serial Bus (USB) Controllers** or under **Other Devices**.   If it's there, Right-Click it and then select **Update Driver**.   Then you can start at Step 4 in the instructions above.
